# Hazardous Weather

# Hazardous Weather

Thunderstorms will be possible mainly across the western Panhandles. Lightning, small hail, gusty winds, and brief heavy rain will be the main threats.

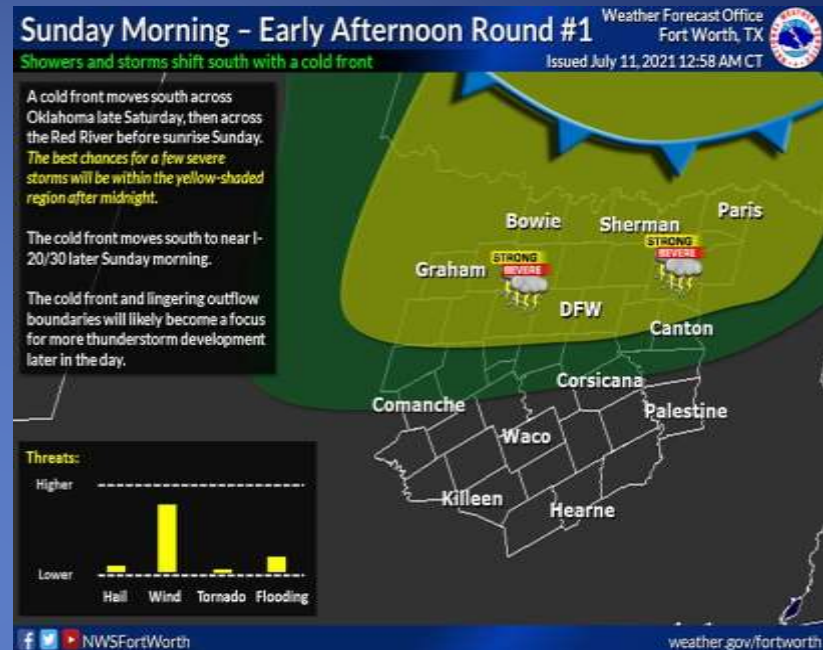

There is a Slight Risk of severe thunderstorms across the southwestern South Plains, and Marginal Risk exists north of that up to a line from Needmore to Aspermont. General thunderstorms may occur elsewhere. Be weather ready!

# Hazardous Weather

**A little cooler today with thunderstorms likely by afternoon across the southern South Plains. Scattered thunderstorms may occur elsewhere across the region, except for the extreme southeast Panhandle.**

**A threat for strong storms, with an isolated severe threat for damaging winds, brief heavy rainfall, and frequent lightning strikes will continue through the early morning hours this Sunday morning along and north of the I-20 corridor. Have your weather plan in place and please pass along any reports to local law enforcement, fire departments, emergency management, or your weather service office in Fort Worth!**

# Hazardous Weather

Additional storm chances will linger Sunday and Monday as a front stalls near, or just south of the I-20 corridor into Central Texas. A few storms may be strong to severe, with hail, damaging winds, frequent lightning strikes, and locally heavy rainfall. Storms are expected to be scattered in nature. Have your weather plan in place and please pass along any reports to local law enforcement, fire departments, emergency management, or your weather service office in Fort Worth!

There is a Slight Risk for strong to severe thunderstorms across portions of the Four State Area today with damaging winds being the primary threat. Locally heavy rainfall with some isolated flooding is also possible.

# Hazardous Weather

**A summer cold front will approach the region today with slightly cooler temperatures and increasing chance for thunderstorms later this afternoon and evening. Some storms could be severe, especially the northern half of the forecast area, so be situationally aware today!**

# Hazardous Weather

Moisture and instability return to the Borderland on Sunday. A more robust day of rain showers and thunderstorms is expected across the region Sunday. Strong thunderstorms may produce severe weather with possibility for strong and damaging storm outflow winds, as well as moderate sized hail that could also produce damage. In addition, deep and healthy moisture in the atmosphere means some of these storms could produce very heavy rain, resulting in flash flooding. So, stay weather aware tomorrow, and be ready to seek quick shelter, and find higher ground.

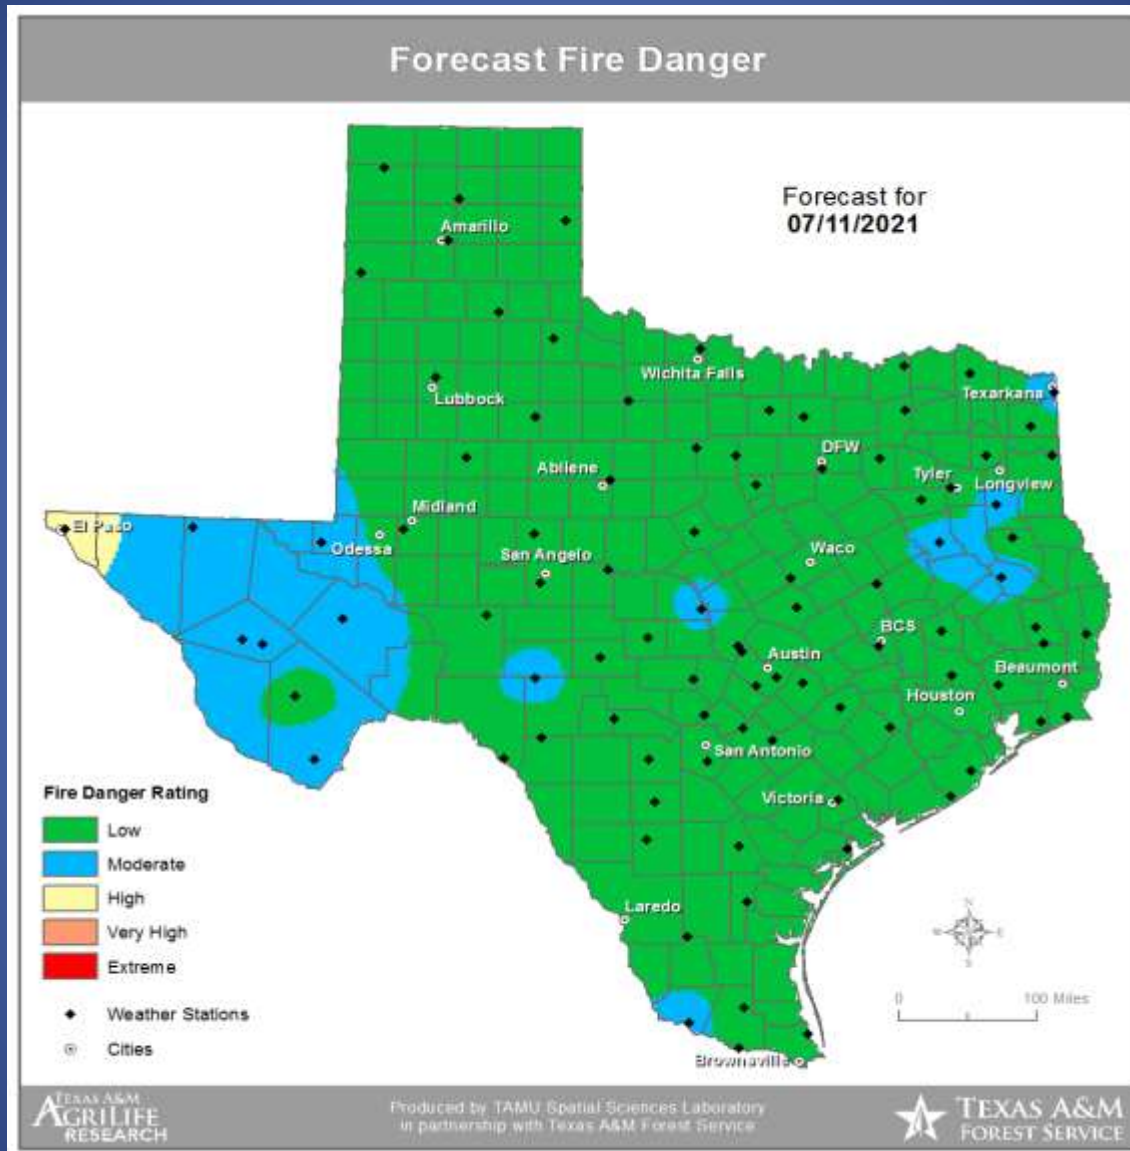

An active day is expected for Sunday. A few storms are possible in the morning. By afternoon, more storms will develop over mountains before moving into the Lowlands by late afternoon and evening. Storms will be capable of flash flooding, damaging winds, and large hail.

# Weather Warnings/Advisories Issued

	<b>WARNING TYPE</b>	<b>LOCATION</b>
